

4.4.4: Bookmarks

GETTING STARTED

Let's practice making hyperlinks in HTML.

STARTER CODE

The given web page has a list of links that are supposed to point to important parts of the CodeHS site. The problem is, the links don't reference an actual web page! Clicking them does nothing.

YOUR JOB

Add a value to the **href** attribute in each of the `a` tags.

The first should take you to: <https://codehs.com>

The second should take you to: <https://codehs.com/sandbox>

The third should take you to: https://codehs.com/my_courses

TEST YOUR PAGE

Select the Open button in the Output window to view your page in a new browser tab. Then test out your hyperlinks.

HINT:

It's much easier to add attributes to HTML tags by switching to "Code View" instead of "Block View"

Solution Code

```
1  <!DOCTYPE html>
2  <html>
3      <head>
4          <title>CodeHS Shortcuts</title>
5      </head>
6      <body>
7          <h1>CodeHS Quick Links</h1>
8          <hr>
9          <a href="https://codehs.com">
10             CodeHS Homepage
11          </a>
12          <br>
13          <a href="https://codehs.com/sandbox">
14             CodeHS Sandbox
15          </a>
16          <br>
17          <a href="https://codehs.com/my_courses">
18             My Courses on CodeHS
19          </a>
20
21      </body>
22  </html>
```

Starter Code

```
1 <!DOCTYPE html>
2 <html>
3   <head>
4     <title>CodeHS Shortcuts</title>
5   </head>
6   <body>
7     <h1>CodeHS Quick Links</h1>
8     <hr>
9     <a href="">
10       CodeHS Homepage
11     </a>
12     <br>
13     <a href="">
14       CodeHS Sandbox
15     </a>
16     <br>
17     <a href="">
18       My Courses on CodeHS
19     </a>
20
21   </body>
22 </html>
```
