

4.5.3: Effective Internet Searches

For each of the following questions, create a search query that you might use to find the answer. Submit the search query used **and** a link to a search result that contains the answer to your question.

1. In the United States, how many gallons of water does the average person use every year?
2. What is the second-longest river in the world?
3. How many species are currently considered “critically endangered”?
4. What is the circumference of Mars?
5. What is the median salary of a cybersecurity engineer?

Solution Code
