1. What is Google's reasoning for collecting your personal information?
2. How does Google get information from you?
3. How can Google get your location information?
4. Can Google recognize your personal smartphone or computer?

Solution Code

default.txt

1. What is Google's reasoning for collecting your personal information?
They say they collect information to provide better services to their users.
2. How does Google get information from you?
Google gets information everytime you search, send an email, watch a video, and more.
3. How can Google get your location information?
They get your location information from GPS, IP address, sensor data from your device, or information about things near your device, such as Wi-Fi access points, cell towers, and Bluetooth-enabled devices.
4. Can Google recognize your personal smartphone or computer?
Yes, Google can recognize this from your IP address.
