

Lesson 1.6: HTML Lists

https://codehs.com/lms/assignment/127272723/lesson_plan

Description	In this lesson, students learn how to add lists to their web pages and practice making different kinds of lists.
Objective	Students will be able to: • Incorporate different kinds of lists to their web pages • Understand the differences between unordered lists and ordered lists.
Activities	4.6.1 Video: HTML Lists 4.6.2 Check for Understanding: HTML Lists Quiz 4.6.3 Example: Grocery Shopping 4.6.4 Exercise: Class Planning 4.6.5 Exercise: Dream Destinations 4.6.6 Exercise: Vacation Guides
Prior Knowledge	• HTML tags • HTML structure

Planning Notes

- Review the slides and the exercises in the lesson.
- This is a shorter lesson with time available for review, enrichment or to move ahead to the next lesson. There is a suggested activity included. This would be an opportunity to observe and gauge how each student is progressing with the material.

Standards Addressed

Certiport IT Specialist HTML and CSS Standards

Name	Description
1.2	Construct well-formed page markup
3.2	Construct and analyze markup that uses HTML5 semantic elements

CIW Site Development Associate Exam Standards

Name	Description
2.9	Use the most current version of Hypertext Markup Language (HTML5) to create Web pages.

Teaching and Learning Strategies

Lesson Opener:

- *Connection:* Give students the following vague prompts for them to write about (on paper). Discussion questions about this activity are included below. [10 mins]
 1. Directions on how to make a peanut butter and jelly sandwich.
 2. Items to bring on a camping trip.
- Have students brainstorm and write down answers to the discussion questions listed below. Students can work individually or in groups/pairs. Have them share their responses. [5 mins]

Activities:

- Watch the lesson video and complete the corresponding quiz. [7-10 mins]
- Let students play around with the *Grocery Shopping* example. Encourage them to add nested lists and styling (bold, italic, etc). [5 mins]
- Complete the *Class Planning* exercise. [10 mins]
- Complete the *Dream Destinations* exercise. [10 mins]
- *Collaborate!:* Students can be grouped or paired up for the *Vacation Guides* exercise. Allow time for the students to discuss and decide on a theme for their list article. Have them work together to divide up responsibilities (who will find the article facts, who will style the page, etc). Have the students write their plan (including the HTML) down on paper before entering it into the editor. This will help a lot with nested lists! If there is time, have the students present their pages to the class. [15-20 mins]
- If time permits, or as an alternative activity, complete the *Layers of HTML* handout. [15 mins]

Lesson Closer:

- Have students reflect and discuss their responses to the end of class discussion questions. [5 mins]

Beginning of Class:

- Did you use a list in your opening activity? Did you indent your list at all?
- Did you use an ordered list or just bullets?
- What tags do you think could be used to format your writing if it was HTML?
 - *Some students may see that `<br>` tags could be useful.*

End of Class:

- There are two different types of lists we can make with HTML. What are they? What are the tags for each?
 - *Ordered lists: `<ol>` and Unordered lists: `<ul>`*
- Regardless of what kind of list we are using, the list item tag is the same. What is that tag?
 - `<li>`
- How would you make a list of lists in your web page?
 - *This would be called **nesting** lists. You would put another `<ul>` or `<ol>` inside of a list item, `<li>`.*

Discussion Questions

Resources/Handouts

[Layers of HTML \(Teacher Version\)](#)

[Layers of HTML \(Student Version\)](#)

Vocabulary

Term

Definition

Modification: Advanced

- Encourage advanced students to tackle the Bonus Challenges in the exercises or to complete supplemental activities

Modification: Students Needing Additional Support

- Pair programming with another student
- Print out video slides for students to reference

Modification: English Language Learners

- Print out video slides and have students use a dictionary to translate unknown vocabulary
- Pair programming with another student
