

Lesson 1.5: Images

https://codehs.com/lms/assignment/127272715/lesson_plan

Description	In this lesson, students learn how to add images to their own web pages using the <code></code> tag!
Objective	Students will be able to: • Embed an image in HTML
Activities	4.5.1 Video: Images 4.5.2 Check for Understanding: Images Quiz 4.5.3 Example: The <code></code> Tag 4.5.4 Example: Building the CodeHS Homepage 4.5.5 Exercise: Collage on a Theme 4.5.6 Exercise: Linking an Image 4.5.7 Exercise: National Parks
Prior Knowledge	• HTML tags • HTML structure • <code><a></code> tag

Planning Notes

- Review the slides and the exercises in the lesson.
- Complete the opening discovery activity on your own so that you are familiar with the steps.
- This lesson uses *Pair Programming*. Determine in advance which pairs or groups of students will work best for your class. View and prepare printouts of the *Pair Programming Guide* for more information and student reflection questions.

Standards Addressed

Certiport IT Specialist HTML and CSS Standards

Name	Description
1.2	Construct well-formed page markup
4.1	Construct and analyze markup that displays images

CIW Site Development Associate Exam Standards

Name	Description
2.2	Add images and graphical formatting to HTML files, and create and edit images and audio.
2.9	Use the most current version of Hypertext Markup Language (HTML5) to create Web pages.

Teaching and Learning Strategies

Lesson Opener:

- *Discovery*: Have students search for a picture of their favorite animal. Have them click on their favorite image. They may notice something that looks like 200 x 465. Ask them what they think this might be (width and height). Challenge the students to see if they can open JUST the image in its

own tab (right click - open image in new tab). Take note of the web address of the image. What kind of file is it (jpg/png/gif - it is an image file)? [5 mins]

- Have students brainstorm and write down answers to the discussion questions listed below. Students can work individually or in groups/pairs. Have them share their responses. [5 mins]

Activities:

- Watch the lesson video and complete the corresponding quiz. [7-10 mins]
- Let students play around with the *The Tag* and *Building the CodeHS Homepage* examples. Encourage them to “mess up” the src attribute so that they can view the alt tag. [5 mins]
- Complete the *Collage on a Theme* exercise. [5-10 mins]
- Complete the *Linking an Image* exercise. Encourage students to “stretch” the image. [5-10 mins]
- *Pair Programming*: Pair up students for the *National Parks* exercise. One student is the “driver” and will write the code. The other student is the “navigator” and will direct the driver in formatting the page. The more advanced students should be made navigators if possible. Use the accompanying handout as a guide. [10-15 mins]

Lesson Closer:

- Have students reflect and discuss their responses to the end of class discussion questions. [5 mins]

Discussion Questions

Beginning of Class:

- Why do you think images are so commonly used on websites?
 - *They are visually appealing and grab the user’s attention.*
- What are some websites you use that have a strong focus on images?
 - *Social media sites, flickr, etc.*

End of Class:

- Why don’t tags need a closing tag i.e. ?
 - *There is nothing to be “stored” within the tag since the image is what is being displayed.*
- Why is the src attribute necessary in an tag?
 - *The src attribute is the web address of the image*
- What is the purpose of the alt attribute?
 - *The alt attribute tells the user what the picture is in case it does not load correctly.*

Vocabulary

Term			Definition
Modification: Advanced			Modification: Students Needing Additional Support
Encourage advanced students to tackle the Bonus Challenges in the exercises or to complete supplemental activities			- Pair programming with another student - Print out video slides for students to reference
			Modification: English Language Learners
			- Print out video slides and have students use a dictionary to translate unknown vocabulary - Pair programming with another student
