

Structuring your HTML Page (teacher)

Corresponding Material:

Web Design Module 2, Structure of an HTML Page

Discussion:

Just like Family Trees, HTML uses the tree structure to determine the relationship between elements in an HTML doc. For this activity, you will practice using the tree structure and organizing HTML code!

This HTML doc is unindented- try fixing it so that the indentation is correct:

```
<!DOCTYPE html>
<html>
<head>
<title>My Homepage!</title>
</head>
<body>
<h1> Hello World!</h1>
<p>This is a paragraph tag!</p>
<h1>
<h1>I put this h1 inside of another
one!</h1>
</h1>
</body>
</html>
```

```
<!DOCTYPE html>
<html>
  <head>
    <title>My Homepage!</title>
  </head>
  <body>
    <h1></h1>
    <p>This is a paragraph tag!</p>
    <h1>
      <h1>I put this h1 inside of
another one!</h1>
    </h1>
  </body>
</html>
```

Using the same HTML doc, write out its documentation tree:
