

Lesson 1.3: Formatting Text

https://codehs.com/lms/assignment/127272701/lesson_plan

Description	In this lesson, students learn about formatting tags that let them modify the appearance of text and make their web pages look clear and aesthetically pleasing.
Objective	Students will be able to: • Apply formatting tags in order to modify the appearance of text and make web pages look clear and aesthetically pleasing
Activities	4.3.1 Video: Formatting Text 4.3.2 Check for Understanding: Formatting Text Quiz 4.3.3 Example: Dictionary 4.3.4 Exercise: Word Definitions 4.3.5 Exercise: Pet Names 4.3.6 Exercise: Call of the Wild 4.3.7 Badge: Formatting Badge
Prior Knowledge	• HTML tags • HTML structure
Planning Notes	• Review the slides and the exercises in the lesson. • Use the editor to prepare an example of unformatted HTML text. Write a few paragraphs or copy and paste something interesting. A good example would be something with steps or something in which formatting would add a huge benefit.

- This lesson uses *Pair Programming*. Determine in advance which pairs or groups of students will work best for your class. View and prepare printouts of the *Pair Programming Guide* for more information and student reflection questions.
- There are handouts associated with this lesson. Consider using them in class or assigning them as homework.

Certiport IT Specialist HTML and CSS Standards

Name	Description
1.2	Construct well-formed page markup
5.2	Construct and analyze styles that format text

Certiport IT Specialist HTML5 App Development Standards

Name	Description
2.3	Transform, style, and enhance text and graphics

CIW Site Development Associate Exam Standards

Name	Description
2.3	Identify and use design and color principles for Web pages.
2.9	Use the most current version of Hypertext Markup Language (HTML5) to create Web pages.

Standards Addressed

Teaching and Learning Strategies

Lesson Opener:

- *Connection*: Present an example of unformatted HTML text. See if the students can read the text. Have a student try to read it aloud. Ask students what would make the text easier to read. [5 mins]
- Have students brainstorm and write down answers to the discussion questions listed below. Students can work individually or in groups/pairs. Have them share their responses. [5 mins]

Activities:

- Watch the lesson video and complete the corresponding quiz. [7-10 mins]
- Let students play around with the *Dictionary* example. Encourage them to use Code View and change and add tags. Direct them to “nest” some tags. How many tags can they nest? [5-10 mins]
- *Match My Code*: In pairs or small groups, have one student open their created example in a new window so that the corresponding HTML code cannot be seen. The other student(s) will view the page and try to recreate the page in their editor using the formatting tags. This can be done once or multiple times using different student creations. Remember that students can use the History Tab to go back to their own creation after trying to match their classmate’s. [10-15 mins]
- Complete the *Word Definitions* exercise. [5 mins]
- Complete the *Pet Names* exercise. [5 mins]
- *Pair Programming*: Pair up students for the *Call of the Wild* exercise. One student is the “driver” and will write the code. The other student is the “navigator” and will direct the driver in formatting the page. The more advanced students should be made navigators if possible. Use the accompanying handout as a guide. [10 mins]

Lesson Closer:

- Have students reflect and discuss their responses to the end of class discussion questions. [5 mins]

Discussion Questions

Beginning of Class:

- What are some ways that you can format or style text?
 - *You can make text italicized, bolded, or underlined. You can strike out text or format a subscript or superscript.*
- What are some ways that you can format the entire document?
 - *You can add a header, title, paragraphs, etc.*

End of Class:

- What are 5 new tags that we can now use for formatting text?
 - *The new tags are , , <hr>,
, and <p>.*

	• What does each tag do? ◦ <i>Bold, italicize, horizontal rule (line), line break, paragraph.</i> • Why do we need to use the
 tag to make blank lines as opposed to just typing out several blank lines? ◦ <i>HTML views any amount of white space as only one space.</i> • Why is it useful to be able to use these formatting tags on our web pages? ◦ <i>The text is more easily read.</i>
