

Lesson 1.2: Structure of an HTML Page

https://codehs.com/lms/assignment/127272694/lesson_plan

Description	In this lesson student upgrade from simple tags to full HTML documents. Students learn some new tags that let them put information in different places on the web page, and they learn about the nested tree structure of an HTML document.
Objective	Students will be able to: • Discern the various parts of an HTML page • Create fully formed HTML pages
Activities	4.2.1 Video: Structure of an HTML Page 4.2.2 Check for Understanding: Structure of an HTML Page Quiz 4.2.3 Example: HTML Template 4.2.4 Example: Hello World Page 4.2.5 Exercise: The <title> Tag 4.2.6 Exercise: Your First HTML Page
New Activities	Example: Using Comments
Prior Knowledge	• Web pages are built with HTML • HTML tags
Planning Notes	• Review the slides and the exercises in the lesson.

- Students may have varying levels of familiarity with HTML. Encourage advanced students to use Code View. If they complete activities early, you can have them create a poster or visual of terms or rules that could help other students.

Certiport IT Specialist HTML and CSS Standards

Name	Description
1.2	Construct well-formed page markup
3.1	Construct and analyze markup to structure content and organize data
6.3	Evaluate the structural integrity of HTML and CSS markup

CIW Site Development Associate Exam Standards

Name	Description
2.9	Use the most current version of Hypertext Markup Language (HTML5) to create Web pages.

Standards Addressed

Teaching and Learning Strategies

Lesson Opener:

- Have students brainstorm and write down answers to the discussion questions listed below. Students can work individually or in groups/pairs. Have them share their responses. [5 mins]

Activities:

- Watch the lesson video and complete the corresponding quiz. [7-10 mins]
- Let students play around with the *HTML Template* and *Hello World Page* examples. Encourage them to change the text in the title and body tags to see the changes. Have students view their code

in Code View to see the correct indentation. [10-15 mins]

- *Break the Page*: What happens if you mess with the structure of a webpage? Lead the students through the “mistakes” below. Have students explore and discuss what happens. Students will need to be in Code View for this activity. [10 mins]
 - What happens if you put an `<h1>` tag in the `<head>` of the webpage?
 - What happens if you put a `<title>` tag in the `<body>` of the webpage?
- Complete the *The `<title>` Tag* exercise. [5 mins]
- Complete the *Your First HTML Page* exercise. [5 mins]

Lesson Closer:

- Have students reflect and discuss their responses to the end of class discussion questions. [5 mins]

Discussion Questions

Beginning of class:

- What HTML tags have you learned about so far?
 - *So far they have seen the `h1` tag for a heading and the `p` tag for a paragraph. They may have discovered others on their own.*
- Webpages all have HTML documents underneath that provide the browser with all of the information it needs to display the page. How do HTML documents provide this information to the browser?
 - *The structure of the page is set by the HTML document.*

End of class:

- What is metadata?
 - *Metadata is data about data. In this case, it is data about the webpage.*
- Where in the HTML document does metadata go?
 - *In the head.*
- What is the difference between the `<head>` and `<body>` of an HTML page?
 - *The head contains information about the page while the body contains the actual page content.*
- What does it mean for an HTML document to have a “tree structure”?
 - *HTML documents are set up like an outline with each level going deeper. At a high level, this can resemble a tree with a main trunk and different levels, or branches.*

Vocabulary

Term		Definition	
Modification: Advanced		Modification: Students Needing Additional Support	
Encourage advanced students to tackle the Bonus Challenges in the exercises or to complete supplemental activities		- Pair programming with another student - Print out video slides for students to reference	
		Modification: English Language Learners	
		- Print out video slides and have students use a dictionary to translate unknown vocabulary - Pair programming with another student
